WE ARE CHANGING YOUR WAY UP

In design, technology, knowledge and life. If you change your way UP, you will enjoy a longer independent life, without obstacles. Enjoying life while you are still in the middle of your life.

We will change your way UP in whatever direction your life continues.

UP Stairlift.

THE UP STAIRLIFT

The UP Stairlift is not just an ordinary stairlift, but a stylish stairlift that fits in any interior. It is made from artificial leather and available in various colours, which gives the stairlift a modern look. Because of its slim design there is enough space to use your staircase in a normal way. The UP Stairlift moves UP to a new level and can even be operated with an app on your smartphone!

No longer in need of a stairlift or moving? The UP Stairlift is fully reusable and can easily be relocated. All rail parts can be converted into a new shape and if necessary, be combined with new rail segments. An environmentally friendly way to change your way UP.

MODULAR RAIL

The rail system of the UP Stairlift consists of 2 parts. Only pre-made rail sections and bends are used. This ensures no matter what your staircase looks like, the material used is always in stock and any rail shape can be created. It is therefore possible to perform quick installations and on-site adjustments. The entire stairlift can be installed quickly and no factory intervention is necessary. Compared to commonly used rails, the rail has a considerably smaller profile as well, which ensures your staircase is not blocked. Furthermore, the rail is made from aluminium and when exhausted still 100% recyclable.

ALWAYS INCLUDED

INTERCOM

You can stay seated safely and push the intercom button if a problem occurs. You immediately get in contact with your UP-dealer*. They can check your stairlift remotely and fix the problem on site or remotely!**

* Depending on your service contract.

** With the help of a WiFi connection.

AUTOMATIC SWIVEL CHAIR

To get on and off the chair safely, the seat automatically turns from the stairs to landing upstairs and downstairs.

AUTOMATIC (UN)-FOLDING FOOTREST

Bending over is no longer necessary, the footrest will automatically (un)fold when you put the armrests up or down.

FOLDABLE ARMRESTS

This makes it easy to access the seat and the stairlift uses less space on the stairs as well when parked.

REMOTE APP

With the use of an application on your smartphone or tablet, it is possible to move the chair up- and downstairs.

With the app you can also lock the lift for use for e.g. children and share diagnostics with your local dealer. This allows most difficulties to be solved remotely.

**THE UP STAIRLIFT
HAS A MODERN
DESIGN, LEATHER
UPHOLSTERY AND
IS AVAILABLE IN
4 COLOURS,
SUITABLE FOR
ANY INTERIOR.**

LANDING OPTIONS

STRAIGHT

The basic finish with a straight rail ending. The stairlift parks at the end of the stairs and no bends are needed for this landing option.

HORIZONTAL

Park the stairlift on a horizontal end piece. You use this option when you prefer to keep the seat further away from the stairs which makes your stairs more spacious.

DROPNOSE

When you prefer the rail to take as less space as possible from the stairs, it is possible to provide the rail with a dropnose end piece (only 160mm / 6,3 inch from the stairs).

AUTOMATIC HINGE RAIL

Do you have a door next to your stairs that would cause the stairlift to block the entrance? With the hinge rail it is possible to park your stairlift without blocking. The hinge rail automatically folds up after use.

PARKING CURVE 90 DEGREES

With the 90 degrees parking curve, the stairlift can be parked just around the corner. A convenient feature to save space. Curves can be made easily due to the modular rail.

PARKING CURVE 180 DEGREES

Save even more space with the 180 degrees parking curve. The stairlift will be parked alongside the stairs, or even behind a wall. Curves can be made easily due to the modular rail.

GOING UP - STRAIGHT

The straight stairlift is suitable for straight stairs with a straight finish with the possibility of a hinge rail or footrest level finish. The straight stairlift is always delivered with an automatic swivel chair, automatic footrest and intercom.

GOING UP - CURVED

The curved stairlift is suitable for a staircase with one or more bends and is always delivered with an automatic swivel chair, automatic footrest and intercom. Do you have straight stairs, but prefer a horizontal or dropnose ending, or a 90 or 180 degrees parking curve, then the curved stairlift is your choice.

SPECIFICATIONS

Motor output speed	0,15 meters per second
Method of drive	Rack and pinion
Power input	24V DC (battery)
Max. load straight model	140 kg / 308 lbs
Max. load curved model	125 kg / 275 lbs
Max. angle of stairs	75°
Rail	Modular rail, extruded aluminum, casted aluminum
Power supply	50-60Hz, 90-240 AC
<i>Our stairlift meets:</i>	
European regulations	EN 81-40:2020
Software and hardware	IEC-61508-2 and IEC-61508-3
EMC standard	EN6100-6-2
Fire resistance	UL94

CERTIFIED BY:
 liftinstituut
SINCE 1933

CONTROL THE UP STAIRLIFT

JOYSTICK

The stairlift is usually operated with the joystick on the armrest. No complicated levers and buttons, just turn the joystick to the right or left.

REMOTE CONTROL

When several people use the stairlift, the stairlift might be upstairs while you are not. With this remote control the stairlift can go down or up again.

REMOTE APP

Besides using a remote control, we also offer an app for your phone which can be used to operate your stairlift remotely via your own smartphone.

ENVIRONMENTALLY FRIENDLY

Social responsibility is paramount in the development and production of the UP Stairlift. The stairlift is produced in the Netherlands and the choice to use an aluminium rail provides enormous savings in energy and CO2 emission. Aluminium is a durable, lightweight and sustainable material. The characteristics of aluminium ensure the rail will last for generations.

Should the rail get exhausted after years of loyal service, then it will still remain 100% recyclable.

RECYCLED ALUMINIUM

Also, the aluminium used for our rail is produced by the most energy-efficient extruder in the world. The aluminium extruder is located in Norway and produces its products with a 70% hydro energy ratio. Besides that, the manufacturer mainly uses recycled aluminium. The process of recycling aluminium uses only 5% of the energy that would be used to make new aluminium. In addition, the recycling of aluminium saves around 80 million tons of greenhouse gases. This corresponds to 15 million cars on the road. Also, because of efficient packaging, transportation costs are reduced.

NO USE OF HEAVY CHEMICALS

Another environmental benefit of using aluminium is the fact that it does not corrode. Most rails require a powder coating to slow down the corroding process of the rail. As the UP Stairlift rail uses aluminium, harmful effects to our ecosystem are avoided.

FULLY REUSABLE

Sustainable manufacturing and reusable products are of great importance. Our unique rail design supports this circular process. Not only the chair can be preserved, but also the modular rail. All rail parts are fully reusable and can be converted to a new shape and if necessary, be combined with new rail elements. The UP Stairlift can be re-installed into your new home when moving or re-installed in another home when you no longer need a stairlift. Good for you and good for the environment.

YOUR ADVANTAGES

NEXT DAY DELIVERY
Measured and installed
within one day

REUSABLE
The modular rail fits on
every staircase

ALWAYS INCLUDED
Intercom, automatic swivel
chair and footrest

REMOTE DIAGNOSTICS
Solving difficulties remotely
